

The restriction of bandwidth for AM amateur radio transmissions would have the immediate effect of reducing the quality of the intelligence carried on the AM wave. The technical aspect of clean quality AM signals is an ongoing quest of those amateurs proficient in that mode. And it is a pleasure to listen to quality transmissions of 6 or 8 mHz bandwidths. I do not operate AM, but do spend time listening to the technical conversations on the amateur bands. I am an Extra Class licensee and have been licensed for 47 years.

Respectfully,

Robert J Rinaldi, W1CNY
